

FLEISCHHACKER

SAFETY IN THE FIELD

FIRST AID AND MEDICAL CARE –
EVERYWHERE AT ANY TIME

FLEISCHHACKER

INVESTMENT IS A MATTER OF TRUST

Over the years, we have become one of the largest suppliers of medical and laboratory products to NGOs and bank-financed aid projects. Day-to-day working relationships under long-term agreements or system contracts exist with almost all UN organizations, the Red Cross, and many other institutions.

IN OPERATION WORLDWIDE

Every year, we deliver to more than 80 countries worldwide. Based on so many diverse experiences, we know what the end users' requirements are in the field and on missions. Just one example: Infrastructural conditions in terms of medical problems can vary quite substantially in neighboring provinces of the same country.

KNOWLEDGE BASED ON LONGTIME EXPERIENCE

Whether it is the first aid treatment in the field or the transport of immobilized patients to a close-by field hospital, Fleischhacker has the right concept for every medical situation. Emergency bullet-wound treatment kits, first aid kits and our complete hospital modules are the cornerstones for a comprehensive care in the field.

INTELLIGENTLY PACKED – ALL YOU NEED IN ONE BAG

KEEP IT SIMPLE AND WORKABLE IN EVERY KIND OF SITUATION AT ANY PLACE IN THE WORLD

This was our idea of emergency and trauma bags when they were created in the first place. Since then, our bags have gone through several adaptations and modifications in order to make them absolutely workable. The basic idea of emergency bags is to guarantee the survival of injured persons in the field and prepare them for transportation to the nearest hospital. The bags typically have several modules to reach this aim. Material for wound dressing, injection, respiration, intubation, and so on are packed wisely in different modules. The clearly marked modules are packed efficiently in a sturdy and solide backpack.

Backpacks in various designs and colors with individual content and customized labels. Our STAVANGER+ Compact has been awarded with the Red Dot Award, an international design competition for product designs.

Emergency sets

Intubation and thyrocricotomy products like larynx masks, tubes, and laryngoscopes

Wound treatment like dressings and compresses

PREPARED FOR **EMERGENCIES** IN THE FIELD

FIRST RESPONDER FOR IMMEDIATE SUPPORT

Due to the long experience with non-governmental organizations and national emergency services, one of Fleischhacker's competences is the supply of first aid equipment for use in the field.

First responders provide immediate support to injured companions and perform first treatments as well as minor examinations. The aim is to take injured persons out of the danger zone as quickly as possible.

The trauma bag contains all necessary equipment for basic and advanced life support (ALS, BLS, and ACLS) in case of, e. g. gunshots, heart attacks, and other vital issues.

Individual first aid kits including wound treatment dressings

Compact tourniquet systems

Emergency bullet-wound treatment sets

Blood stopping Israeli bandage and burn treatment

TRANSPORT – IN CHALLENGING SITUATIONS

LIGHTWEIGHT AND SIMPLE HANDLING

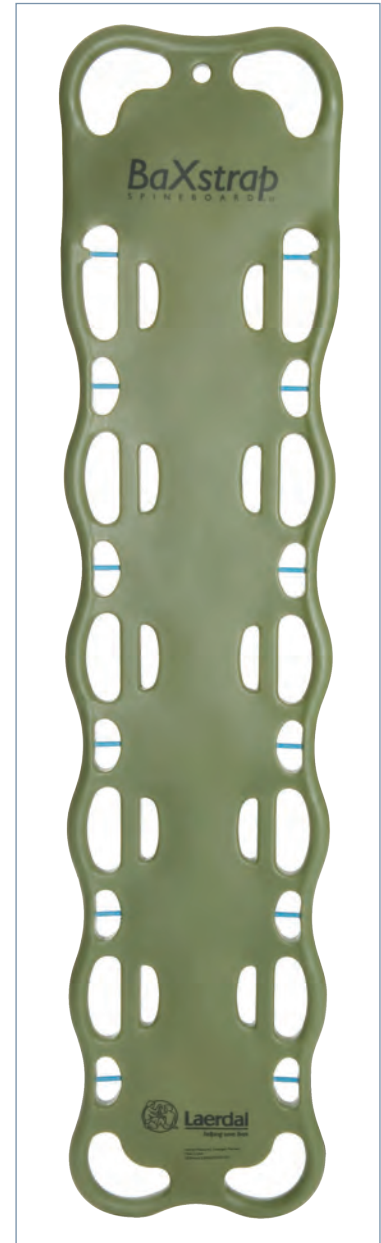

All products for respiratory management, transport, and immobilization of wounded persons are made of high-quality materials to allow the best possible and most comfortable treatment. Especially when it comes to spinal care, immobilization is a critical step to reduce instability and harm when transporting a patient. As one of the lightest, most rigid boards on the market, the spine board prepares the user for any situation.

The extrication collar Stifneck select combines four different collar sizes in one single collar, stabilizing spinal patients correctly and easily with this adjustable collar. It locks quickly but safely and is suitable for every patient.

Non-breathing patients are a typical part of emergency situations. Easy-to-use airway management can save lives. Fleischhacker offers classical equipment like masks, tubes, and larynx masks. But also brand-new disposable airway systems like the Ventrain® system.

INPATIENT CARE OF INJURED PERSONS ON A MISSION

FIELD HOSPITALS

Due to changing situations, field hospitals need to be relocated as quickly as possible. They allow a short stationary stay of an injured companion for precise examination, minor operations, and supervision of vital signs. Therefore, the demands placed on the medical equipment are high. Besides reliability, they need to be solid and compact in design for mobile use and easy operation. We are a full-range supplier and supply not only medical equipment and consumables, but also all other required items such as tents, transport boxes, and office equipment.

AUXILIARY HOSPITALS

Auxiliary hospitals for major examination, and operation, are located in safe and secured areas. We have established many hospitals in crisis regions. To provide a concept, we need the status of the existing infrastructure including supply connections and an idea as to which kind of surgical operations and examinations are expected. We regularly deliver complete modules worldwide, like dental facilities, operating rooms, low-dependency wards, high-dependency wards, ambulances, and emergency rooms.

Furniture for examinations and surgical interventions

Medical devices, e. g. ECG, patient monitoring, and syringe pumps

Lamps

Infusion stands
